

Say goodbye to soggy straws

Evanesce® straws look and feel like plastic
but are compostable and made from plants

Most of us know the harmful impact of plastic straws and while paper straws may seem like a sustainable alternative - **paper straws are poison**, frequently containing nasty chemicals and carcinogens. In addition, the production of paper straws kills our valuable forests and releases harmful dioxides.

Evanesce plant-based straws are the perfect alternative to paper and plastic straws. They are truly sustainable, cost-effective and 100% commercially compostable.

Why Evanescence straws are better:

Compostable

Recyclable

Cost-effective

No harmful
chemicals

No
microplastics

Locally
manufactured
