

New! Home compostable straws

Evanesce® CA straws look and feel like plastic but are home compostable and made from natural materials

Plastic straws have left a detrimental mark on our planet, and while paper straws appeared to offer a better solution, they often harbor chemicals and carcinogens that pose risks to both humans and the environment.

Enter Evanesce CA straws, a game-changer in sustainable alternatives. Unlike paper or plastic, these straws are crafted to naturally decompose across various environments, leaving no trace of harmful chemicals or microplastics. Evanesce CA straws, made from wood-sourced cellulose and acetate derived from vinegar, provide a sturdy and taste-neutral sipping experience for cold beverages.

Join us in embracing a greener, cleaner future with Evanesce CA straws, where enjoying your drink also means safeguarding our planet.

Why Evanesce straws are better:

Home
Compostable

Recyclable

Cost-effective
